ALASTIN’S REGENERATING SKIN NECTAR

WHAT IS ALASTIN’S REGENERATING SKIN NECTAR?
“Alastin Skin Nectar incorporates TriHex Technology, a proprietary blend of peptides and other ingredients that enhance the skin by clearing the extracellular matrix. TriHex Technology is novel. It purges the extracellular matrix of debris (old fragmented collagen and elastin) allowing for cellular signaling and the stimulation of not only collagen but elastin. It supports the skin’s natural regenerating process. The skin becomes more receptive to treatments as well as applied skincare.”

HOW ARE PATIENTS USING IT?
“All of my injectable, laser (Sciton’s Halo and Fraxel), and pre-energy (Infini, Ulthera, microneedling) patients are instructed to begin using the Nectar twice a day before receiving the procedure.”

HOW WELL DOES IT WORK?
“We have seen significant improvement in the recovery time of both injectable and laser patients. The Nectar, with the TriHex Technology, allows our patients to return to work and social lives much quicker after procedures. Because of the benefit they enjoy using the Nectar, I transition them over, after about two weeks, to the Restorative Skin Complex with TriHex Technology that has the benefit of the TriHex in addition to adipose tissue stimulation. It is not competitive but compliments topical and oral supplements.”

WHAT ARE YOUR PATIENTS SAYING ABOUT IT?
“We were one of the first practices to offer this new technology to our patients in Georgia. They appreciate that we remain ‘cutting edge’ in our offerings. Our patients are very pleased with the results they are seeing, especially in the tone and texture of their skin, which may be attributed to the stimulation of elastin.”
